

# THE STORY OF YOU

## MASH DIRECTIONS

1. Write MASH and list your categories: Life partner, number of kids, job, salary, car, and where you live.
2. List four or five options for each category, with your friend picking a terrible last option for each category.
3. Draw a Swirly spiral to determine the "magic number." Tell the other person to close their eyes while you draw a spiral. The other person should say "Stop" when they want you to stop drawing (he/she can open his/her eyes now). Count from the outside to the inside the number of lines you drew. It can help to draw a line through the center of the spiral and count how many times that line crosses the spiral, too. The number you come up with is your magic number.
4. Count each of the category options until you reach the magic number (including the M A S H) and cross off the option you land on.
5. When all but one option in a category is struck out, circle the remaining one.
6. Continue around the page, skipping over the marked off options and the final circled option.
7. Read out your full fortune.
